

CHANGI AIRPORT FOREIGN OBJECT DEBRIS MANAGEMENT POLICY

Introduction

Foreign Object Debris (FOD) in the airside poses significant threats to the safety of both aircraft and personnel. As such, it is imperative that every individual in the airside practises responsible waste management to avoid generating FOD.

The Changi Airport FOD Management Policy cements the joint commitment of every airside user to prevent FOD and establishes the responsibilities of all airside users in both FOD and waste management.

Changi Airport FOD Management Framework

The policy is targeted at all airside users including but not limited to ground service providers, airlines and contractors. To operate in the airside of Changi Airport, airside users are to:

- Be responsible to manage the waste generated by their operations in the airside areas they use, leaving them in a state of cleanliness no worse than prior to use
- Design an appropriate waste management system for all operations from inception to disposal
- Be vigilant about potential FOD hazards and play a proactive role to ensure that these hazards are removed or mitigated in their daily operations
- Inform and engage CAG on their FOD and waste management efforts

As the aerodrome operator, to achieve a safe, clean and efficient airside, CAG will:

- Oversee and coordinate all FOD and waste management efforts in the airside
- Provide a regular forum for airside users to discuss and resolve FOD and waste management concerns in an amicable and cooperative manner
- Act against any transgressions if airside users refuse to cooperate and jeopardise the safety of the airside through irresponsible behaviour

With frequent and open communication and the aid of regular platforms to discuss and resolve FOD and waste management issues, CAG is committed to work with all airside users to achieve the best outcomes for the airside community.
